SUMMARY

Backend Engineer with over four years of experience building secure APIs, reliable transaction workflows, and distributed backend systems. Shipped 10+ production applications with 30,000+ combined downloads and a 2,000-student learning platform, focusing on Node.js, TypeScript, MySQL, PostgreSQL, and Redis. Built fault-tolerant database architectures, enforced role-based access control, and optimized high-concurrency systems.

EXPERIENCE

Software Engineer · [Ennovate Lab](#)

October 2025 – Present

Oyo, Nigeria

- Wired an Idempotency-Key pipeline across POST and PATCH endpoints using Redis and memory fallback, ensuring network retries and duplicate requests never create duplicate charges or double-debit customers.
- Built database migrations, chart of accounts, and debit-credit posting logic for a double-entry ledger, maintaining balanced auditable trails for charges, refunds, and disputes.
- Developed secure backend APIs using Node.js, Golang, TypeScript, PostgreSQL, and MongoDB to support authentication, transaction handling, and role-based access control.
- Refactored database interactions and concurrent query execution paths to handle high user activity.
- Implemented CI/CD pipelines and managed containerized deployment workflows on Azure to ensure reliable releases and environment consistency.

Software Developer · [Cephas ICT HUB](#)

January 2023 – September 2025

Nigeria

- Delivered end-to-end backend solutions and APIs using Node.js, TypeScript, PostgreSQL, and MongoDB for fintech, e-commerce, and health-tech client projects.
- Built and maintained 10+ cross-platform mobile applications using React Native, reaching 30,000+ downloads with responsive performance and reliable client-server synchronization.
- Guided junior developers and students as a mentor in backend architecture, database design, API security, and production deployment practices.

Founding Engineer · [StudyPady](#)

June 2024 – September 2025

Nigeria

- Architected and built the Node.js backend and data models for an edutech platform serving 2,000 registered students and 200 daily active users across two universities.
- Engineered backend services supporting CBT examination sessions, past-question access, and real-time leaderboards with low latency and high availability.
- Delivered the cross-platform mobile and web applications, ensuring smooth integration with backend services and reliable state management.

PROJECTS

HonourWorld · [Live Demo](#)

React Native, TypeScript, TanStack Query, Redux, REST APIs

Engineering: *Cross-Platform Mobile Architecture, State Management, API Integration*

- Mobile application with 10k+ active users focused on community engagement and digital service delivery.

Paystack-style fintech platform · [Live Demo](#)

TypeScript, React, Node.js, Express, TypeORM, PostgreSQL, MySQL, Redis, Docker

Engineering: *Authentication & Authorization, RBAC, Idempotency, Transaction Processing, Double-Entry Ledger, API Security*

- Full-stack payment infrastructure platform featuring automated ledger posting, merchant onboarding workflows, and idempotency guarantees.

Luma-style Event Platform · [Live Demo](#)

Next.js, TypeScript, Node.js, PostgreSQL, Redis, Docker

Engineering: *Event Management, Ticketing & Inventory, Authentication & Authorization, RBAC, Transaction Processing, Idempotency, Real-Time Updates, Caching, API Security*

- Full-stack clone of the Luma event discovery and ticketing platform, featuring event creation, hosting, and ticket purchasing flows built with Next.js.

Oreno · [Live Demo](#)

Next.js, TypeScript, Prisma, PostgreSQL, Redis, Pusher

Engineering: *Multi-Tenancy, Real-Time Sync, Caching, RBAC*

- Multi-tenant project management SaaS with real-time WebSocket updates, RBAC, and cached server actions.

EDUCATION

Ladoke Akintola University of Technology

2019 – 2024

Bachelor of Science, Computer Science

SKILLS

Languages: TypeScript, JavaScript, Golang

Backend: Node.js, Express, NestJS, REST APIs, WebSockets, RBAC, Idempotency, Double-Entry Ledgers, Message Queues, Event-Driven Architecture, Background Jobs, Transaction Processing

Databases & Caching: PostgreSQL, MySQL, MongoDB, Prisma, TypeORM, Redis, Supabase

Testing: Unit Testing, Integration Testing

Cloud & Infrastructure: AWS, Azure, GCP, Docker, CI/CD, Vercel, Linux, Nginx

Frontend & Mobile: React, Next.js, React Native, Tailwind CSS, TanStack Query, Redux
